

Deliverables for milestone 1

In milestone 1, you have to implement the following items:

- Create two projects having names `project_data` and `project_dashboard`
- In `project_data`, load your data from sources into a dataframe and write a webservice that returns the data of the dataframe.
- In `project_dashboard`, invoke the webservice to receive the data from JS and show the data in at least one d3 chart in your dashboard.

After completing the milestone 1, create a `readme.txt` file where you describe how to run the webservice and the dashboard. Put `project_data`, `project_dashboard` and `readme.txt` in a zip file and upload in the moodle.
